

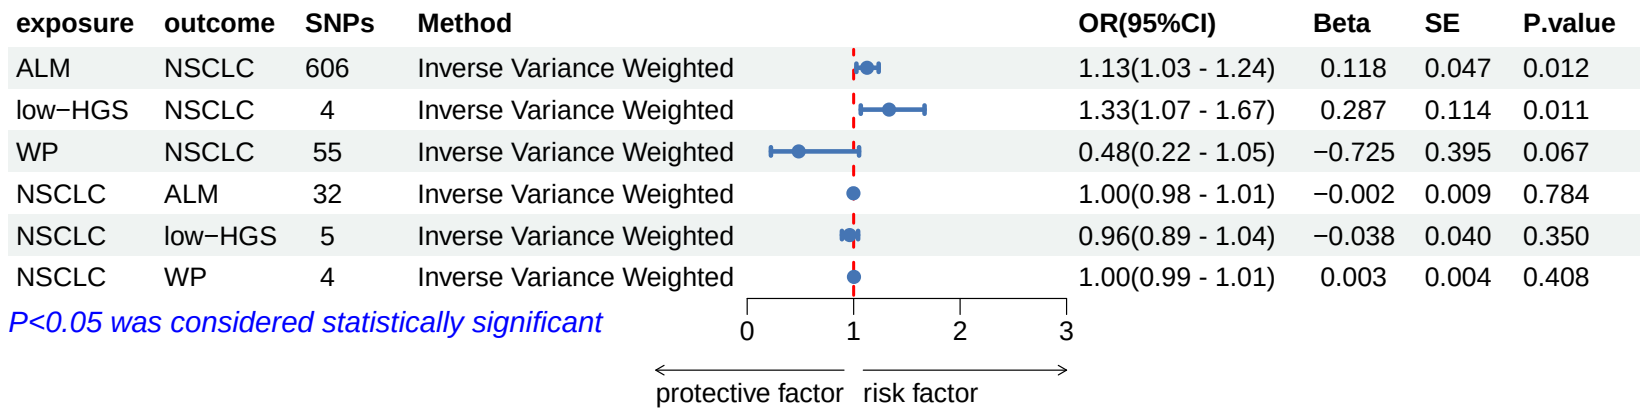

Figure 2.Two-sample MR analysis results

NOTE: The IVW method was used to evaluate the causal relationship between ALM, low-HGS, WP, and NSCLC. An OR > 1 signifies an increased risk associated with the exposure indicator, whereas an OR < 1 indicates a decreased risk of the outcome. ALM, appendicular lean mass; low-HGS, low hand-grip strength; WP, walking pace; NSCLC, Non Small Cell Lung cancer.
